## Debian GNU/Linux

## Debian GNU/Linux 5.0.3 Lenny [5 DVDs]

Debian GNU/Linux 5.0 "Lenny" includes more than 23,000 software packages, such as the K Desktop Environment 3.5.10 (KDE), the GNOME desktop environment 2.22.2, the Xfce 4.4.2 desktop environment, LXDE 0.3.2.1, the GNUstep desktop 7.3, X.Org 7.3, OpenOffice.org 2.4.1, GIMP 2.4.7, Iceweasel 3.0.6 (an unbranded version of Mozilla Firefox), Icedove 2.0.0.19 (an unbranded version of Mozilla Thunderbird), Linux kernel version 2.6.26, Samba 3.2.5, Inkscape 0.46, Xen Hypervisor 3.2.1. Additionally, "Lenny" now supports several Netbooks, in particular the Eee PC by Asus.

With the integration of X.Org 7.3 the X server autoconfigures itself with most hardware. Newly introduced packages allow the full support of NTFS filesystems and the use of most multimedia keys out of the box. Overall improvements for notebooks have been introduced, such as out of the box support of CPU frequency scaling. Further improvements in system security include the installation of available security updates before the first reboot by the Debian Installer

You can install Debian 5.0.2 "Lenny" with this DVDs on your computer.

## Knoppix 6 Repository [6 DVDs]

Here we go! Extend the software pool for your Knoppix with our Knoppix 6 Repository on six DVDs. More than 20 Gigabyte of additional programs without internet connection! Works with Knoppix and all other Debian-Lenny-based Linux distributions. This is the complete Debian Lenny repository (main and non-free, as of 10. September 2009). Knoppix 6.x is 100% compatible with Debian 5.x alias "Lenny".

With a few easy steps you can use our Repository DVDs with Knoppix: - Insert DVD 1 into your computer's DVD drive.

- Start the command shell in Knoppix.
- On the command shell simply type: `apt-cdrom add`.

You only need to do this once per DVD. The software management (APT/Synaptic) will then memorize which programmes are stored on which DVD. Later, when you install programmes, Synaptic will ask you to insert the according DVD. No internet connection necessary and much faster!

You think 5 DVDs are too inconvenient and expensive? Have a look on our Knoppix 6 Repository on Blu-ray disc!

Knoppix, the mother of Live Linux, is now available in version 6.0.1. Amongst others you can expect:

- Faster system boot: The systems events during the system boot, i.e. hardware recognition, are strongly parallelized. Compared to earlier versions of Knoppix version 6 needs less than half of the boot time.
- New default desktop: By default the desktop "LXDE" is being used. LXDE ist very fast and needs less ressources.
- For visually impaired people: Thanks to a speaking menu system and speaking programmes the computer can be used without seeing the desktop.
- New network manager: Network connections can now be configured via a graphical user interface.
- Better Debian compatibility: Knoppix 6 is based on the default installation of Debian 5 alias "Lenny".

The amount of pre-installed applications has been dramatically reduced compared to earlier releases of Knoppix. Via the package management "Synaptic" additional programmes can be installed easily with a few mouse clicks. You can get the additional software via internet or from ourRepository DVDs resp.Repository Blu-ray disc. Knoppix 6 can be installed to harddisk via start menu.

openSUSE 11.1 contains more than 230 improvements compared to 11.0. One focal point was the improvement of the usability of openSUSE. With release 11.1 openSUSE introduced a strict separation between free (Open Source) and proprietary software: The Live CD does not contain any proprietary software like audio and video codecs, Adobe Flash Player and so on. Users who want to use such proprietary software can download it from the internet or install it via this additional CD (click here).  
 With this Live CD you can test openSUSE without any danger. If desired you can then install openSUSE 11.1 onto your computer - also parallel to an already installed operating system.

## Ubuntu Linux 9.04 Repository [7 DVDs]

Here we go! Extend the software pool for your Ubuntu (also Kubuntu, Xubuntu, Linux Mint and so on) with our 7 Ubuntu Repository DVD's. A huge amount of additional programs without internet connection. Works with all Ubuntu-based Linux distributions. It's that easy to install additional programs with our Ubuntu Repository DVD's: - Add the DVD's to Synaptic (see below).

- As usual search and mark your desired programs in Synaptic.
- Insert the needed DVD into your DVD drive and install your marked programs.

Our 7 DVD's contain the original Ubuntu repositories main, universe, multiverse and restricted as of 19. September 2009.

Only a few easy steps to add our Ubuntu Repository DVD's to Synaptic, the Ubuntu package management: - Start Synaptic.

- Click Edit, Add CD-ROM ... in the menu.
- Insert the DVD's into your drive one after another.

You find our Repository on 7 DVD's too inconvenient and expensive? Then our repository on Blu-ray disc is an alternative! Click here.

Knoppix, the mother of Live Linux, is now available in version 6.0.1. Amongst others you can expect:

- Faster system boot: The systems events during the system boot, i.e. hardware recognition, are strongly parallelized. Compared to earlier versions of Knoppix version 6 needs less than half of the boot time.
- New default desktop: By default the desktop "LXDE" is being used. LXDE ist very fast and needs less ressources.
- For visually impaired people: Thanks to a speaking menu system and speaking programmes the computer can be used without seeing the desktop.
- New network manager: Network connections can now be configured via a graphical user interface.
- Better Debian compatibility: Knoppix 6 is based on the default installation of Debian 5 alias "Lenny".

The amount of pre-installed applications has been dramatically reduced compared to earlier releases of Knoppix. Via the package management "Synaptic" additional programmes can be installed easily with a few mouse clicks. You can get the additional software via internet or from ourRepository DVDs resp.Repository Blu-ray disc. Knoppix 6 can be installed to harddisk via start menu.
